

Die GÜTTLER® Master Cut cuts the stalks smoothly or...

... splits them completely so that they can rot quickly, and the corn borer has no chance to survive.

The Super Maxx® cultivator or Prismenwalze® Matador with tined unit is used to mix the organic residues with soil and help them rot. Emerged weeds are combated. With the aid of the seeder, the winter greening can be seeded.

This helps the microorganisms in the soil and makes the soil more fertile. Legumes accumulate nitrogen, which is immediately utilised by the clover lawn and later made available for the subsequent crop.

The knife roller Master Cut 600 cuts rapeseed stalks into small pieces and mixes them with the soil. They can rot faster and volunteer rapeseed can germinate well.

Master Cut 600

Knife roller

The catch crops and harvest residues are professionally crushed!

GÜTTLER®
Leading in Soil Structure

High cutting frequency

The new GÜTTLER® Master Cut 600 knife roller with 6 m working width has an excellent cutting frequency, even in „green“ catch crop and soft clover lawn stocks. Upon removal of the mulch cover, it is evident that

- the vegetation has been uniformly flattened and aligned on the soil in the driving direction,
- the vegetation has been smoothed lengthwise,
- there are no plants lying across the driving direction,
- the theoretical cutting length can be largely maintained in practice!

Pushed knife roller

The pushed arrangement keeps the roller on the soil. Rubber-sprung bearings help to reduce vibration. The knives are helically arranged, which ensures a smooth running.

2 x 3 m oscillating = good ground contouring + absolutely even pressure distribution across the entire working width!

The levelling bar significantly contributes to the work result:

- it runs relatively close to the ground,
- it flattens the plants in the driving direction,
- because of the narrow gap between the lower edge of the bar and the ground, the vegetation is smoothed lengthwise,
- ideal conditions for the 7 knives per circumference.

The parallelogram guidance of the bar:

- ensures a perfect ground contouring,
- prevents blockages because it automatically regulates the gap to the ground (depending on the vegetation, a basic adjustment must be made),
- the machine is protected from overloads through built-in predetermined breaking points.

GÜTTLER® modular system

The new GÜTTLER® Master Cut front as a knife roller can be combined very well with other devices. The GÜTTLER® SuperMaxx® Culti with 6 m working width, tined unit with 5 rows, synthetic ultra prism roller and seeder takes care of professional greening and combats the corn borer in just one pass.

Furthermore, customers like to use the GÜTTLER® Matador with tined unit in front and seeder as a combination device for corn borer control and winter planting.
