The roller with the golden hoofprint®

Optimal for pastureland

Already our great-grandfathers knew the effects of animal hooves on pastures

- Makes turfs denser, more stable, and more fertile!
- Provides soil contact to ensure successful reseeding!

Optimal for agriculture
No capping – smoothly rolling

The roller with the golden hoofprint® for an optimal seedbed on the field:

- Firm and fine below – perfect seed embedding
- Above loose and crumbly – perfect capping protection, no drifting, valuable soil moisture is preserved

Encourage volunteer rapeseed to sprout – accelerate straw decomposition.

The best choice for field and pastureland

- Improved field emergence – erosion protection
- Tight turns, no friction damage
- Strong crops, better yields
- Catch crop management

GÜTTLER®
Leading in Soil Structure

*Rolling **frozen winter seeds** – stimulate tillering.*

***Rolling over catch crops** – stopping growth.*
With huge impact

Catch crop management
CAP conform with GÜTTLER®

***Catch crop management** – Ask us!*

Rolling winter killed seedings

„The roller with the golden hoofprint®“ not only stimulates the tillering of thinned cultivations, but also ensures soil contact of strongly frozen crops.

The all-season device from GÜTTLER®

- Professional pastureland maintenance with or without GreenMaster for seeding or reseeding of pastureland
- Rolling before and after seeding
- Rolling nurse crop in corn fields
- Rolling winter killed seedings, stimulate tillering
- Rolling-in catch crops (after seeding)
- Effektive corn borers combating
- Flattening catch crops – greening-conform

Catch crop management

- Immediately after der first stubble processing with the Super Maxx® BIO
- immediately after seeding with the GreenMaster and the GÜTTLER® Prism roller
- At the start of flowering, rolling catch crops at 6-7 km/h, legumes can establisch themselves and add nitrogen to soil.
- Slow rolling several times if alternating frost – Glyphosat effect!

The roller with the golden hoofprint®
The Original. Since 1978

305 Prism points/m² and approx. 450 kg/m working width

- Punktual pressure effect – excellent soil contact
- For an optimal seedbed
  - → Fine below, above approx. 3 cm coarse crumbs
  - → Optimal capping protection
  - → Valuable moisture is preserved (capillaries are broken)
  - → Quick and improved field emergence

Tight turns – no friction damage!

- All the prism rings are arranged aligned, meaning no friction damage.
- The roller is attached to the tractor lower links and not on the drawbar. The „split pont“ is therefore behind the tractor. Tight turns possible!

Combating corn borers after silage maize
Economical with huge impact.
Option: levelling bar
