The roller with the golden hoofprint®

The roller with the golden hoofprint®
The Original. Since 1978

Already our great-grandfathers knew the effects of animal hooves on pastures

- Makes turfs denser, more stable, and more fertile!
- Provides soil contact to ensure successful reseeding!

The „key“machine for agriculture and pasterland

Separate use of roller and harrow possible - thanks to the modular system:

- Professional pastureland maintenance with or without GreenMaster
- Rolling before and after seeding
- Rolling nurse crop
- Rolling winter killed seedings, stimulate tillerinn
- Catch crop management > Greening-conform
- Combat corn borers

GreenMaster harrow:
As required solo or combined with GÜTTLER® Roller.
Unsurpassed compact design
The load on the tractor is reduced
Enormously manoeuvrable

GreenMaster

from 2,50 to 8,00 metres

The best choice for pastureland
More milk from grass

Maximum care for pastureland
top agrar

GÜTTLER®
Leading in Soil Structure

*GreenMaster **TINE SEED** – flexible reseeding direct into the turf.*

*GreenMaster **BROADCAST SEED** – uniform reseeding.*

GreenMaster TINE SEED.
Ideal for contractors.

The patented TINE SEED technology guides the grass seeds safely to the soil. The new GreenMaster TINE SEED eliminates the risk of seed sticking to moist and sprouted cultivations.

The advantages of row seeds and broadcast seeds combined in one machine:

- The seed is distributed pneumatically
- A certain amount of the seed bounces off the soil and is distributes as broadcast seeding between the rows
- Ideal space distribution
- Even if the grass has grown higher, the seeds still reach the soil safely
- No seed sticking to moist grass

Space between the seeding tines: 7,5 cm. Patent: EP 16160700.7

GreenMaster BROADCAST SEED.
Proven since 2005!

The Ripperboard removes intensively felt, without clogging. The compact harrow section has a great clearance, heavely felted turf do not clog.

The harrows presses in the seeds.

Deflector nozzles distribute the broadcast seeds widely between the tines.

The 5-in-1-solution from GÜTTLER®

1. Levelling areas
2. Areate the sward
3. Removing felt
4. Closing gaps
5. Restores soil contact

Fight against meadow grass.

The first harrow that „grabs“ the felt. Shallow-rooted space robbers, like the meadow grass, are effectively combed, valuable, deeply rooted grass therefore remains.

What you should consider when harrowing:

- The sward should be short so that the GreenMaster can work optimally.
- The soil should be absolutely dry. It must noch stick between the fingers!
- The soil should be crumbly and not silty.

It‘s worth the effort!

- Best, tasty and easily digestible forage
- High forage performance
- Protein forages on own pasturelands

Ripperboard QUATTRO

Doubles the number of tines, reduces the tine spacing to 3,75 cm, and has the effect of a 4-rows harrow.
Despite the narrow tine spacing the combed material do not clog.

The shortest 4-rows harrow in the world!
